V-Tech have been working on a professional-grade, fully automatic DPF Cleaning Machine that will set a new standard for workshops, garages and fleet service providers.. Designed for cars, vans, and trucks, the all-new V-Tech DRS-200 DPF Cleaning Machine combines intelligent automation, robust stainless steel construction, and next level cleaning performance. Equipped to clean any type of Diesel Particulate Filter including passenger cars, LCV's, heavy-duty Commercial Vehicles and more.

The machine's adjustable cleaning modes ensure optimal results for each vehicle type. The machine is constructed from 304-grade stainless steel for maximum durability and corrosion resistance, making it a solid long-term investment for any busy garage or fleet maintenance centre.

Efficiency is at the heart of the DRS-200's design. it handles the complete Test, Clean, and Dry cycle with minimal operator input, reducing downtime while improving consistency and productivity. The 7-stage water filtration system keeps the cleaning process clean and eco-friendly, while the heated water system with a large 220-litre tank, dual water pumps, and a blower motor ensures it can meet the demand of even the busiest operations. Safety is also a priority, with features like a low-water alarm to prevent damage and CE approval to guarantee compliance with safety standards. Bright LED illumination improves visibility during operation, and the inclusion of a foot-pedal manual cleaning mode gives technicians extra control for removing stubborn debris from the exterior of the DPF.

The **DRS-200** puts precision at your fingertips with its advanced touchscreen control, allowing technicians to easily navigate through cleaning and testing cycles for consistent, accurate results and a simplified workflow. It also offers complete transparency thanks to pre- and post-clean testing with printed reports, ensuring both technicians and customers can see clear, measurable data on DPF performance before and after servicing. **This feature not only builds trust but also helps validate the quality of work carried out in your workshop.**

Innovative Design Highlights make the **DRS-200** stand out even further:

V-TECH
DRS200

Press Start, Clean Smart.

- *Premium 304 Stainless Steel Construction - Built to last with high-grade stainless steel for maximum durability, corrosion resistance, and long service life.*
- *Twin High-Performance Italian Water Pumps - Dual premium pumps deliver consistent power and reliability for optimal cleaning performance every time.*
- *Advanced Multi-Stage Filtration System - Ensures cleaner water circulation, extending component life and maintaining peak cleaning efficiency.*
- *Universal DPF Compatibility - Capable of cleaning all types and sizes of diesel particulate filters with precision and care.*
- *Fast Cleaning Cycle - Wash & Dry in 60 Minutes - Efficient process completes most cleaning cycles within an hour (depending on DPF size), minimizing downtime.*
- *Hot Air Drying System - Rapid drying technology reduces waiting time and boosts overall productivity.*
- *Reliable 220V Single-Phase Operation - Simple plug-and-play setup compatible with standard workshop power supplies.*
- *Comprehensive 2-Year Warranty - Confidence guaranteed with full parts and labour coverage for peace of mind.*

The Perfect Investment For....

Garage Owners

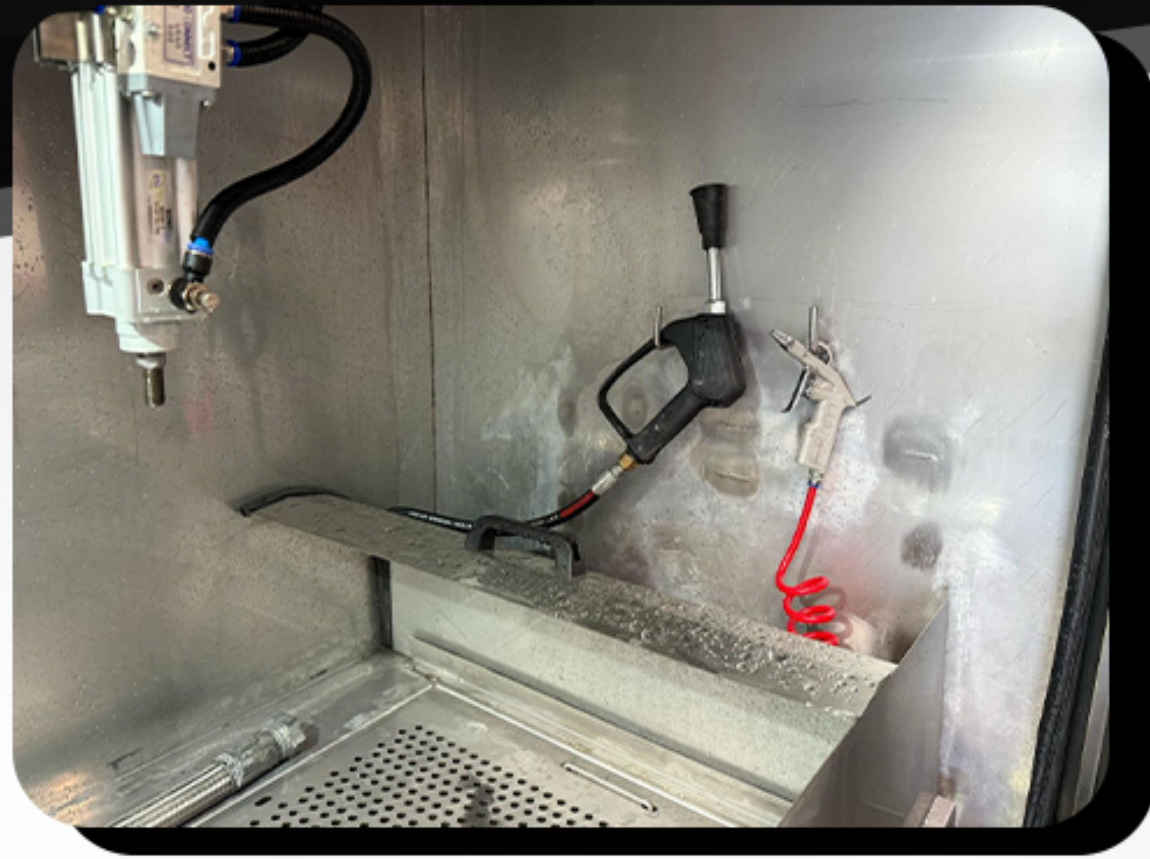

- *New Revenue Stream – Offer DPF cleaning in-house instead of outsourcing, increasing workshop profits.*
- *Customer Retention – Keep customers coming back instead of sending them to competitors for DPF servicing.*
- *Quick ROI – High demand for DPF cleaning means the machine can pay for itself in a short period.*
- *Professional Image – Owning specialist equipment sets your garage apart and builds trust with customers.*
- *Reduced Downtime for Clients – Fast turnaround service keeps your customers' vehicles on the road.*

Commercial Fleet Owners

- *Lower Maintenance Costs – Extends the life of expensive DPF units by restoring them instead of replacing.*
- *Minimises Vehicle Downtime – On-site cleaning option gets vehicles back in service quicker, reducing lost earnings.*
- *Improved Fuel Efficiency & Performance – A clean DPF keeps engines running optimally, saving fuel across the fleet.*
- *Compliance with Emissions Standards – Regular DPF maintenance ensures vehicles remain fully compliant with UK and EU emissions legislation, avoiding costly fines and failed inspections.*
- *Extended Vehicle Lifespan – Prevents engine strain and premature component wear, helping fleets maximise the life and reliability of their vehicles.*
